

AVIATION SCALE / LASER TEST SHEET

09 October 2026 | A4 | Print Actual Size / 100% - NEVER Fit to Page

Verify the 100mm bar before using any dimensional result. Reference artwork is not machine code.

A / Decimal hour

42 x 42mm artwork frame
100 ticks; 0.01h = 36s; one seam

B / Knots / statute MPH

42 x 42mm artwork frame
0-200kt / 300-degree linear sweep

Production vectors above retain white/red ink on a dark VIEWING background.
Use the separate monochrome SVGs for engraving preparation. Do not engrave these backgrounds.

DIMENSION CHECK / measure between the two end marks

20 x 20mm square

STROKE COUPONS (mm)

NOMINAL FONT-SIZE COUPONS (mm; not measured cap height)

TEST RECORD / no power, speed, passes or material compatibility are prescribed

Machine / lens: _____ Material / finish / thickness: _____

Sample ID: _____ Operation / power / speed / passes: _____

Measured bar: _____mm Smallest legible text: _____mm Stroke: _____mm

Contrast / coating / kerf / damage observations: _____

Decision / operator / date: _____

PREPARATION CHECKLIST

- [] Outline SVG text in the manufacturing application; recheck dimensions and glyph spacing.
- [] Assign engraving vs cutting explicitly; suppress notes, coupons and frame/background fills.
- [] Use a scrap sample and the machine/material manufacturer's operating procedures.
- [] Check actual annulus fit: this is a pilot chapter-ring specimen, not a supplier-fit certificate.
- [] This is not an hour timer, automatic Hobbs record, or operational navigation approval.
